

Dear Student Assistants,

Your enthusiasm and work contributes significantly to the success of our projects and the whole research group. The funds for your payment originate partly in intramural sources as well as external grant applications. Presently this includes socializing sensorimotor contingencies (H2020-FETPROACT-2014, 641321), Multi-Site Communication in the Brain (DFG, SFB 936), RTG Situated Cognition (DFG), RTG Computational Cognition (DFG), ErgoVR (BMBF, V5KMU17/221), Next Gen Vis (Marie-Curie Training Network MSCA-ITN-2014-ETN), and RTG "Vertrauen und Akzeptanz in erweiterten und virtuellen Arbeitswelten" (UOS). These grants are either starting, mid term, or on the home stretch, additional applications are submitted and of course we perform pilots for continuations / new projects. Although the topics vary somewhat, a joint focus of our research is multisensory integration and sensorimotor coupling. It is not always possible to differentiate which measurements relate to which project(s). Furthermore, a detailed assignment of individual measurements to projects would result in unproductive micromanagement. As a consequence, the work you are performing might contribute to the progress of any of the aforementioned projects. I'm happy to answer any questions regarding the different grants and our projects.

Best regards, Peter König

I've read and understood the above statement regarding the scope of my work as a student assistant. I've had sufficient opportunity for discussion and no open questions remain.
